

PC-Horse - the ultimate Horse Diet Calculator for nutrition consultants and horse feed suppliers.

Here are the reasons why a great number of leading feed companies use our program to give their customers superior advise:

PC-Horse is the most advanced Horse diet calculator on the market - based on scientific experience and developed for more than 30 years.

Major brands, and more to come, are included in the program – and product data are kept updated by the feed company's own experts.

The original input of nutritional data (energi and protein) are automatically converted to national units ready to be used by all PC-Horse users.

Local generic feeds (roughages, concentrates and and minerals) are included.

The program keeps track of the customers' history and details about horses, analyzed roughage and recent rations.

Customers (Horse owners) can send in all their necessary horse data by a ready-to-calculate-web-form, "Webhorses", via the internet to your advisors.
